APT-CV2-Vx-LN-CVO Modules

Features

- APT-CV2 controllers add advanced control features to standard constant voltage (CV) drivers
- CVO versions of the APT controllers are operable to control multiple outputs for constant voltage LED channels simultaneously
- Integrated between the CV driver and LED modules, the DC modules are powered directly from the CV driver
- Operable for independent control over each output channel and/or control over overall intensity and CCT
- APT Programmer enables in-factory and in-field changes to control settings including CCT range, CCT mapping and Intensity mapping
- Wired versions available with DMX512/RDM (VA) or 2x isolated 0-10V ports (VC)
- Wireless versions available with Casambi BLE Mesh (VWC) or Silvair BLE Mesh (VWS)

Ordering Information

Product Code	Description
APT-CV2-V*x*-LN-CVO-*wwww*	**V*x*** – Hardware version **LN** – Linear form factor **CVO** – Constant voltage output ***wwww*** – Internal code provided by Arkalumen as a simplified configuration code for repeat orders

Hardware Version	Functionality
VA	DMX512/RDM
VC	0-10V
VWx	Wireless – BLE Mesh

System Architecture

Design Requirements
1. APT controllers are designed to work with a wide range of drivers, but a fixture manufacturer must test the APT controller for driver compatibility and ensure proper system operation before installation.
2. The DC voltage output from the constant voltage driver should be matched to the desired voltage across each of the constant voltage LED channels.

DMX Address Assignment

Enabled Features	Required DMX Channels
Independent Channel Control	One DMX address is required per available output channel
Calibrated CCT Control	Two additional DMX addresses are required if calibrated CCT mapping is enabled, one for controlling the CCT and one for controlling the overall light intensity

Schemes

Scheme ***n***	# of DMX Addresses	DMX Address

Cool White	**CW**	**Intensity Control**	**INT**

1. The assigned DMX addresses are customizable. The above table is a list of the default schemes available.
2. Changing the DMX Address Assignment does not change the physical wiring of the controller to the LED module. Please refer to Figure 3 for warm white/cool white wiring application.
